

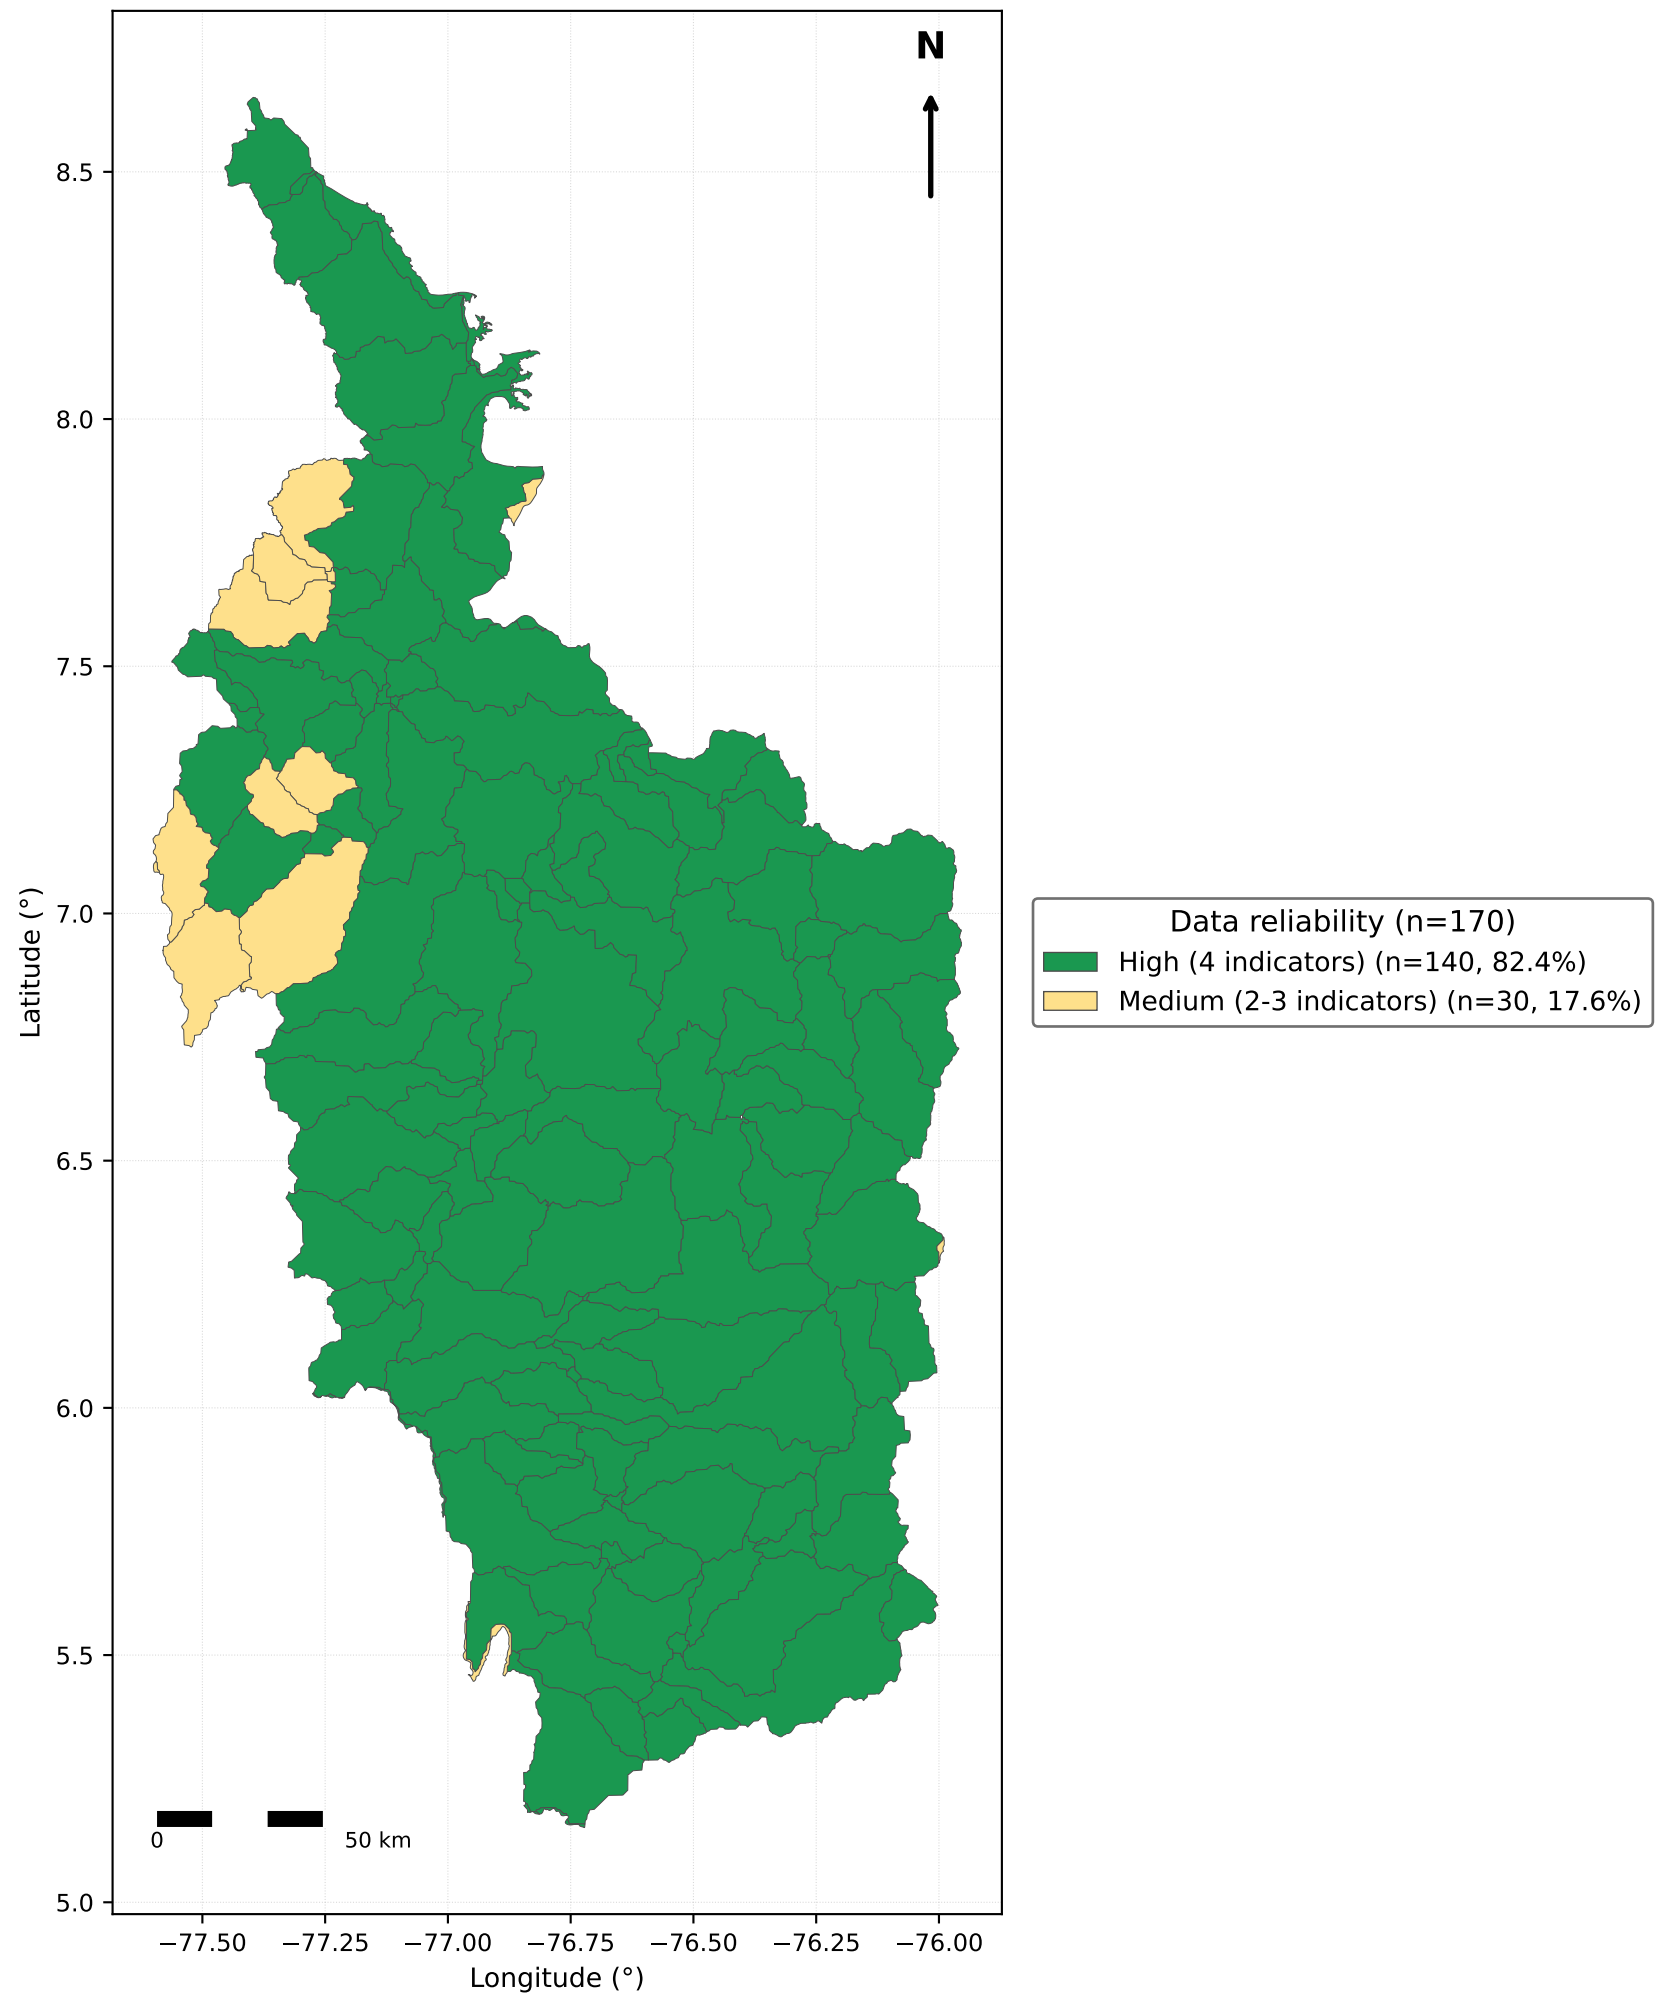

Fig. 6. Data reliability by subbasin, Atrato basin (n=144 mapped of 170 analyzed).

Source: Authors (2026). Reliability based on the number of valid indicators (D1, D2, D4, D5) per subbasin.
Note: 26 coastal slivers excluded from cartography due to geometry limitations but included in the statistical analysis (n=170).
Medium reliability subbasins show mean ICSHM-EO = 0.740 vs 0.589 for High reliability, evidence of data-sparse artefact.
